

How much does manual billing cost your company?

Many finance teams still handle subscription billing manually. To calculate the cost of a manual process, you need to take inventory.

Document the amount of hours (daily, weekly or monthly) that go into a specific tasks and how many people are involved in it (e.g. invoice creation, payment reconciliation, credit notes, subscription changes, reporting, etc.).

Then, multiply by their hourly rate (if there are big differences, it helps to calculate individually).

People x hours x hourly rate

Example:

Your finance team of 5 spends 6 hours a week on invoicing your recurring invoices manually each week. Their hourly rate/wage is 60€.

$$6 \times 5 \times 60 = 1800\text{€} / \text{week}$$

You can now calculate:

- monthly costs (x4 = 7200€)
- or annual costs (x45* = 81.000€ / Year).

“Thanks to Frisbii, we are now able to use RFID tags to automate our billing process for end users which has reduced our manual billing work by 50%.”

Sarah Kim Lassen Grøn
Coordinator for Communications & Projects at Base2Charge

People	Monthly costs
Hours / week	x
Hourly Rate	Annual costs your team spends on manual work
Costs	x

*Calculation based on 45 working weeks per year

With Frisbii Recurring Billing, you can save on average*:

*Many of our customers managed to reduce their manual billing by 50%

Save costs and automate your recurring billing with Frisbii

Automate your recurring billing and payments for more efficiency, data transparency and compliance

Connect the Frisbii Recurring Billing platform easily with your bookkeeping, ERP and CRM for one centralized data view.

Reduce churn and failed payments with payment retries, automated card updates and churn prediction.

Rely on a platform that is built for European legislation (PSD2, GoBD, VAT, GDPR, PCI DSS).

Easy onboarding with our dedicated support team that knows the different markets and industries to help you with the perfect setup.
